Stage 4A · UNMATCH-inspired SigLIP patch–text review

Visual→text score = max cosine over retained instruction tokens; values are affinities, not probabilities.

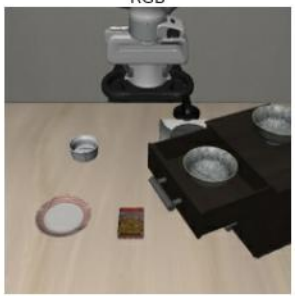

Top-score masks are illustrative heuristic visualizations, NOT validated foreground segmentation. Oracle is shown post hoc only.

Task-4/task-5 instruction text is context-limited in the saved diagnostic; see the report for truncation. Final−penultimate compares relevance maps, not raw feature tensors.

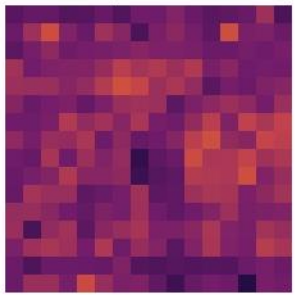

Task 4/state 0 · same image, matched vs mismatched phrase

All score maps use the same cosine scale; map values are visual→text max affinities.

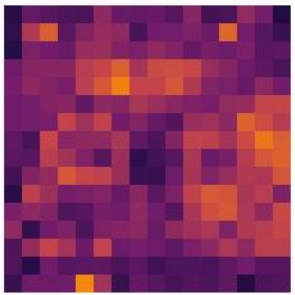

RGB

Matched phrase: black bowl

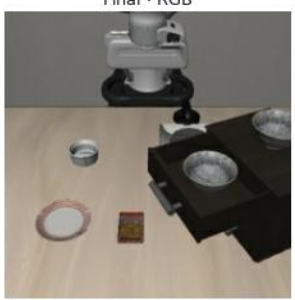

Mismatched phrase: red cup

Matched − mismatched
